

PROTECT ILLINOIS' TREES

MOVING FIREWOOD CAN TRANSPORT
FOREST INSECTS AND DISEASES.

ONLY BURN LOCAL OR CERTIFIED FIREWOOD

Tree-killing pests hitchhike on firewood — spreading insects and diseases that destroy our trees and forests.

Protect your favorite places from this threat:

- ▶ Leave firewood at home — don't transport to campgrounds or parks.
- ▶ Buy locally harvested or certified firewood.
- ▶ Ask a park ranger or campground host about where to get local firewood.
- ▶ Tell your friends not to move firewood.

Learn more at:

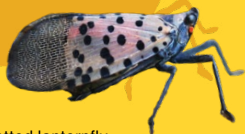

**DON'T MOVE
FIREWOOD.org**

Forest insects and diseases kill thousands of trees every day. Keep your back yard, campgrounds, and favorite places safe.

- ▶ Don't move firewood.
- ▶ Use only locally harvested or certified firewood.
- ▶ Enjoy your campfire — burn all your firewood on site responsibly.

Before and after images of trees killed by emerald ash borer
