

Gypsy moth masks (male and female)

Make your moth mask:
Print mask on cardstock or other thick paper. Paint with black eyes, dark brown antennae, gray or brown 'nose' and mouthparts, and medium brown or tan for the face. Glue a few brown feathers to the antennae. Cut out eye and string holes. Add string!

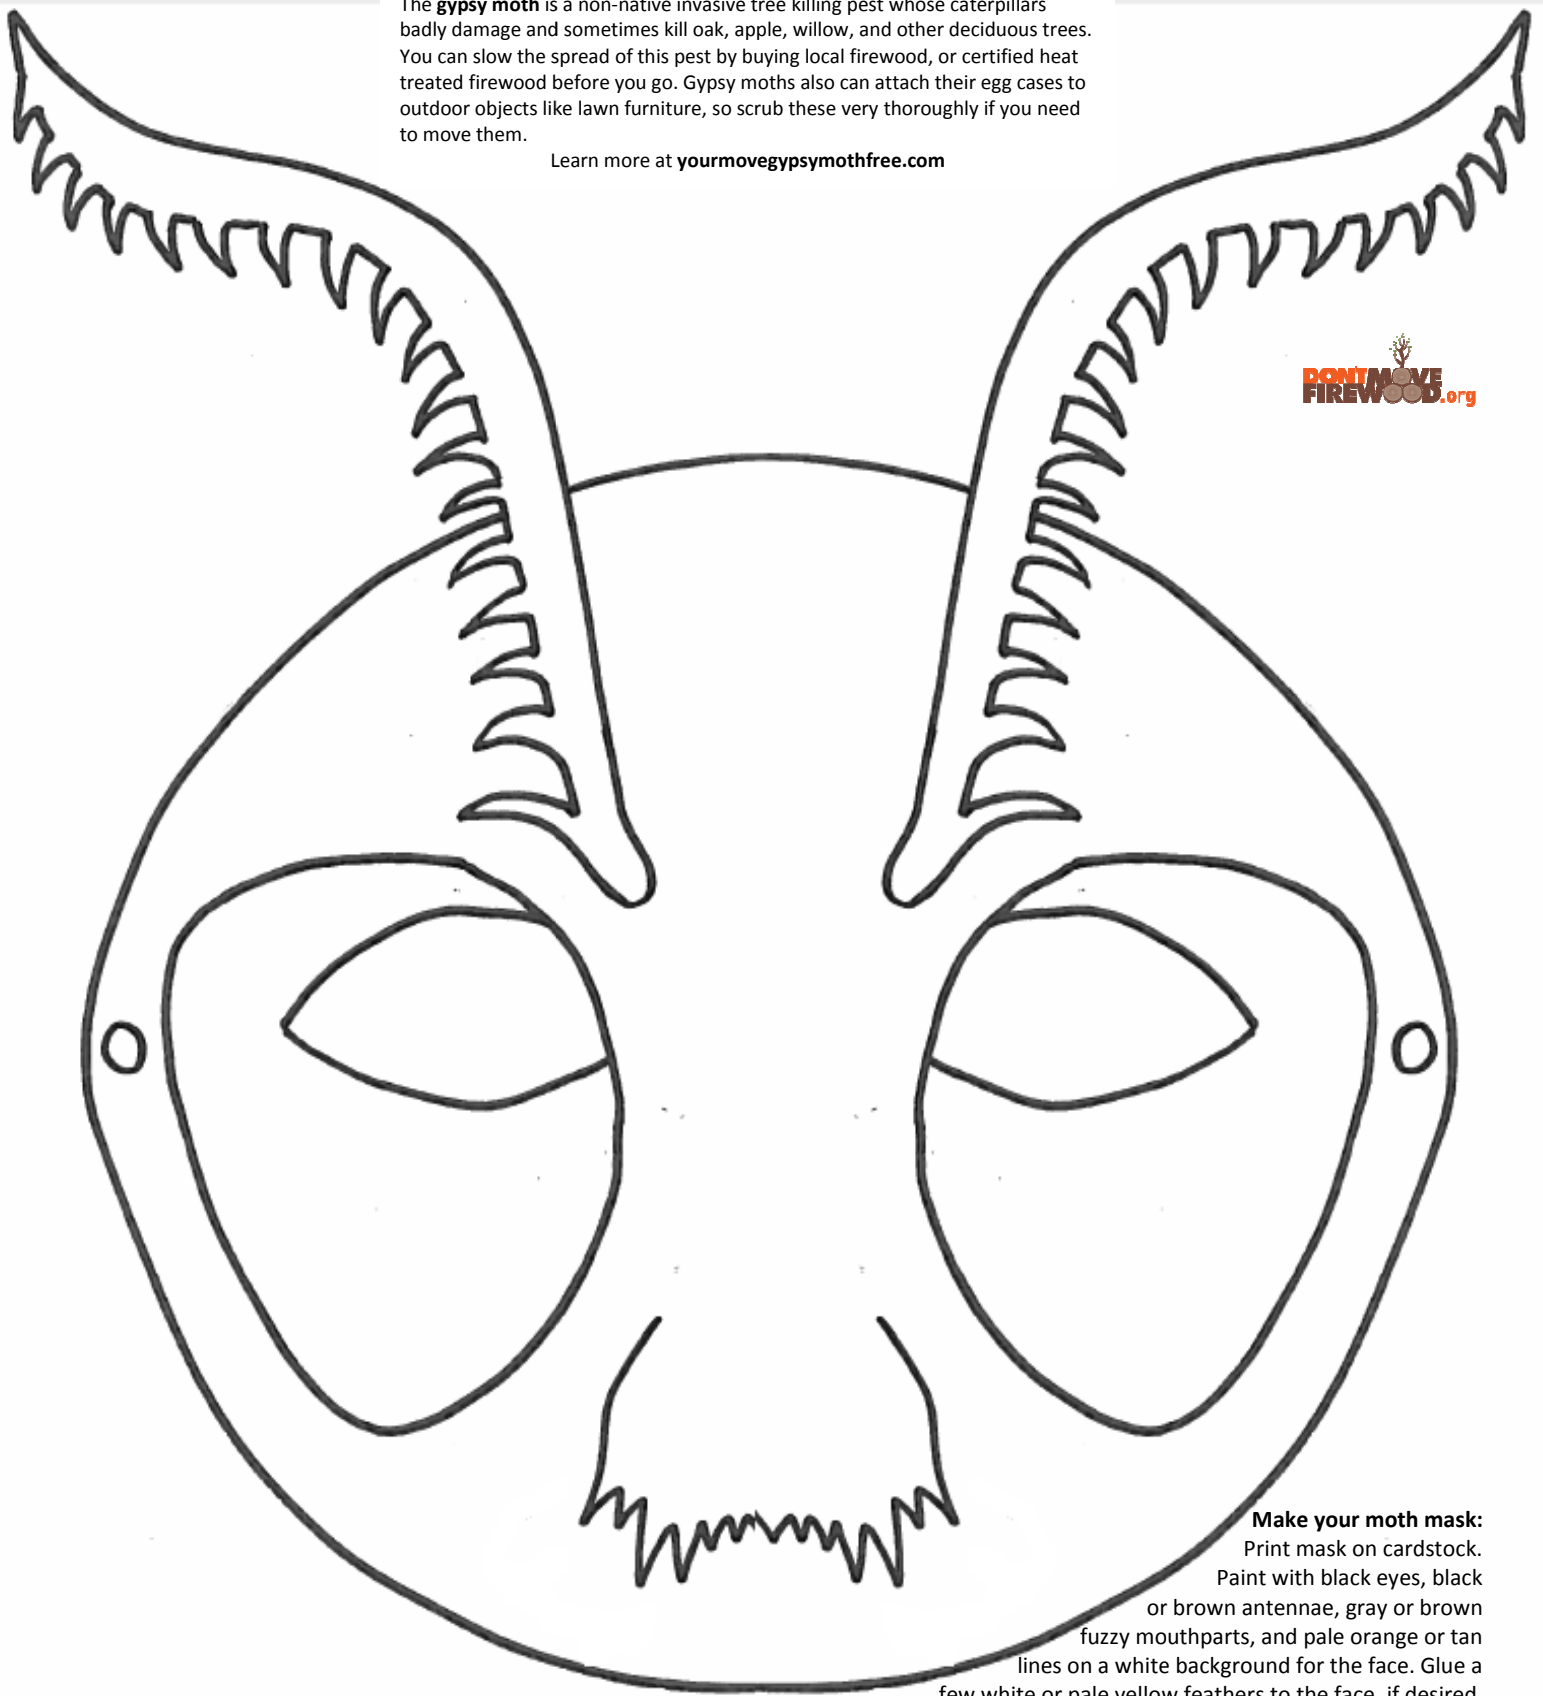

*This is a **male moth**. See next page for the female mask.*

Don't Move Firewood has made several bug masks for you to use with your forest pest and pathogen outreach. To find these masks and lots more, visit **Don't Move Firewood** at dontmovefirewood.org, or email info@dontmovefirewood.org

Gypsy moth masks (male and female)

The **gypsy moth** is a non-native invasive tree killing pest whose caterpillars badly damage and sometimes kill oak, apple, willow, and other deciduous trees. You can slow the spread of this pest by buying local firewood, or certified heat treated firewood before you go. Gypsy moths also can attach their egg cases to outdoor objects like lawn furniture, so scrub these very thoroughly if you need to move them.

Make your moth mask:
Print mask on cardstock.
Paint with black eyes, black or brown antennae, gray or brown fuzzy mouthparts, and pale orange or tan lines on a white background for the face. Glue a few white or pale yellow feathers to the face, if desired.
Cut out eye and string holes. Add string and wear proudly!

This is a **female moth**. See first page for male mask.
