

FIREWOOD

BUY IT WHERE YOU BURN IT.

Tree-killing pests can hitchhike on your firewood!

Pests, like the emerald ash borer and Asian longhorned beetle, threaten our trees, forests, and communities. New infestations can start if you take firewood with you when you travel.

Protect the places you love:

- Leave firewood at home- do not transport it to campgrounds or parks.
- Ask your campground how you can get locally harvested firewood.
- Be aware of firewood regulations.
- Tell your friends not to move firewood.

For Vermont specific
