

# MOVING FIREWOOD can transport forest insects and diseases.

## BUY IT WHERE YOU BURN IT.

If you're a camper heading out for a trip — or just getting firewood for your stove — do nature a favor. Don't potentially transport invasive species.

- ▶ Buy locally harvested firewood.
- ▶ Gather on site where permitted.
- ▶ Ask a park ranger or campground host about where to get local firewood.

The forest will thank you.

Forest insects and diseases kill thousands of trees every day. Keep your backyard, campgrounds and favorite places safe from these insects and diseases.

Prevention is the key. Buy firewood near where you will burn it. Don't move firewood when you travel, camp or visit another state.
