

# FIREWOOD ALERT!

**YOU** have the power to protect trees and forests across the South!

## BUY IT WHERE YOU BURN IT.

Pests like the invasive emerald ash borer can hitchhike in your firewood. Practice these simple steps to prevent invasive pests from reaching new campgrounds and parks:

- ▶ Don't move firewood long distances, especially not between states and regions.
- ▶ Buy local firewood, certified heat-treated firewood, or gather firewood on site when permitted by the campground or landowner.
- ▶ Use firewood from your own property in your home or yard — don't take it with you when you travel or camp.
