

FIREWOOD ALERT!

Southwestern trees and forests need your help. Did you know that moving firewood across state lines can accidentally bring dangerous pests and diseases to your favorite recreation places and public lands? Prevent the spread of pests. Protect the places you love.

BUY IT IN NM. BURN IT IN NM.

You can prevent the spread of tree-killing pests and diseases by making safer firewood choices:

- ▶ Collect local firewood where permitted; check with the campground host or landowner for options.
- ▶ Buy firewood at or near your destination.
- ▶ Don't take firewood home after your trip
- ▶ Only obtain as much firewood as you would need, and burn responsibly.
